Data Science Engineer
80-100%

How will generations live together in the future? How can elderly people stay an active part of society? Which role will technology play? These are the questions that drive us!

CARU is a young Zurich based company. We ensure safety and wellbeing in living environments. Our smart IoT system enables elderly, their families and care takers to connect more efficiently – both in emergencies and in daily life. In turn, we empower people to keep autonomy.

Your work

- Analyze behavioural time series data gathered from CARU Smart Sensors to extract patterns and predictive informations using state-of-the-art data science tools.
- Design and implement CARU data science and business intelligence framework running on AWS infrastructure.

Requirements

- Master’s degree in computer science, engineering or equivalent industry experience
- 2+ years with time series modelling, machine learning, deep learning
- 2+ years with data science tools (e.g. Apache-Spark and cloud computing services like AWS, GC, ...).
- Strong python skills and experience in standard libraries like TF, Pandas, SciKitLearn etc.
- Swiss work permit

Are you excited about working in an extremely dynamic environment and passionate about innovation? Then we look forward to receiving your electronic application!
